Cognitive Science @ Hofstra

Cognitive Science is a multi-disciplinary research effort to understand a fantastically complex system: our minds (and brains, and bodies) in their social and natural settings. The more we know about how that system works, the better we understand what we are, why we do the things we do, and how we might change ourselves to improve our lives.

The “Introduction to Cognitive Science” course (CGS 10) is an interdisciplinary course open to anyone. We also offer a Minor in Cognitive science: CGS 10 is required, plus 15 s.h. in selected courses from Cognitive Science departments: see http://www.hofstra.edu/academics/colleges/hclas/cognitive/ for details.

For more information and advisement for CGS minors please contact Professor Dardis in the Philosophy Department: Anthony.Dardis@hofstra.edu.
