Mentor Statement

Please provide the UG Research Fellowship Committee with the following:

- A short statement about the student's preparation for doing the proposed research.
- A statement describing the development of the research project and proposal. Discuss the origin of the research question, the development of the experimental design and the development of the written proposal. The committee understands that the research question and experimental design are often not student generated, but if they are we would like to know that. Please indicate how much input you provided in the development of the research proposal.
- A mentoring plan for the summer research. When will the student be doing the work described? The student is expected to work for 10 weeks, 40 hours/week but this is somewhat flexible. The 10 weeks do not need to be continuous (summer meeting and vacations for both student and mentor can be accommodated) or the student can spread his/her research over more weeks at fewer hours. Please just describe the plan you have made for mentoring this student.

Kindly enter the above-referenced information on the following pages.
